Weather Widget Instructions:

- 1. Unzip the file named 'weather-no-key.zip' to a folder on your computer.
- 2. In BrightAuthor:
 - a) In layout tab, create an image zone that is 517x1080 in size (or scaled to a similar size)
 - b) To import the weather widget for this zone, go to the playlist tab and:
 - i. Select 'Interactive Playlist'
 - ii. Right click within the playlist area and select "Import state"
 - iii. Locate the file named 'weather-no-key.bse' to import

- g) Publish the presentation to a networked BrightSign player that is connected to the Internet and a screen.
- 3. To configure the weather widget using your Weather Underground key:
 - a) On the BrightSign screen, you should see a weather zone similar to the image below showing the IP address of your player and the suffix of ':8008' (If the IP address of the player does not display on screen, boot up your BrightSign player without the SD card to view the IP address and take note of it)
 - b) On your PC connected to the same network as your player, go to a web browser and type in the IP address with the :8008 suffix.

- c) Enter your city, state and Weather Underground key (for non-USA enter the country for the state, i.e. Paris and France)
- d) Click the 'Update Weather' sun icon to save your settings
- e) Your BrightSign screen should now display the weather of the city you set it for.
